## THAT FITS! CHECK AFTERWARDS.

A The $Y$ of the harness should sit on the sternum so that the shoulders and larynx are unimpeded.

B
Two fingers should be able to fit between the chest strap and the dog's chest, so that it isn't too loose or too tight.

C The chest strap should fit with a large enough gap between the strap/band and the front legs the strap/band and the front legs
to allow for unimpeded freedom of movement.

D The length of the back should be chosen according to the dog so that the tail has sufficient freedom of movement.

E Important: Make sure to also check each position when the harness is in use, so that the dog's movement is not restricted when the leash is pulled.
